14th October, 2022

Greetings dearest community,

RE: MESSAGE FROM THE CEO

I trust that you are doing great and hope it continues that way.

The purpose of this letter is to give you all a brief overview of what BeezGroup is, what we do and what we hope for the future.

Brief history of BeezGroup

This company has gone through various modifications since the idea about it was hatched in 2013. We have had names like Voitek Media, CodeRithms, SkriptKrew until we decided in 2018 that it would be BeezGroup. We also have future alternative names to give it, just in case.

The idea that led to this company being created was my passion for tech stuff way back during childhood. I experimented on a lot of stuff, and have failed a million times but it has been a learning opportunity for me to improve and adapt to change.

I have met an awesome bunch of people over the years, who I shared this company idea with and they believed that it could be possible. But I always tried and failed due to various circumstances.

I have been trying out a lot of stuff behind the scenes, and it was until yesterday that my team decided that it was the right time to go in live mode.

Structure

BeezGroup operates in two modes:

- 1. Developing custom software on-demand***

Here, we plan to apply/receive projects or deals or gigs from clients and partners concerning developing software products that ranged from apps, websites, APIs and integrated systems.

- 2. Developing an off-shelf digital environment***

In 2019, we developed a product map for the digital environment but we were short of resources and lost most of our work. The only exhibit we have is this image below:

Basically, we envisioned a division of the company as a fully independent technology conglomerate that offers a SaaS product (Software-as-a-Service) operating in every sector of the economy, with each sub-product run by a dedicated algorithm; controlled by one main/central algorithm.

For each sub-product in each sector, there would be sub-divisions for mobile/web/desktop technologies, DevOps, Cyber Security, Artificial Intelligence/Machine Learning, IoT and Robotics. Plus, others we plan to now add.

The new product map is under review, and will be released to the community soon.

Purpose of this community

This community has been created to engage those with hopes of offering contracts/gigs/projects to the company, as well as those interested in interacting with the digital environment being built, through testing and offering us feedback on where to improve.

Additionally, we intend to bring more people on board such that we can learn from each other and build each other in skills and experience. This space is where the company will also be posting job openings, internships (in future), news about product releases and upgrades, industry news around the globe as well you occasionally casually interacting with the company staff (fireside chat).

Call to action

We intend to get started as soon as you read this sentence. We are looking for competent individuals in the areas of Business, Health, Agriculture, Mineral Science, ICT, Education, Finance, Space Exploration, Social Good, Fashion, Sports and Entertainment. You may not necessarily be proficient in coding (as long as you are willing to learn). The most preferred programming languages are C, C++, Java, Javascript, Python, C#, HTML, CSS, PHP, Kotlin, Swift, Flutter/Dart and SQL.

For any product that we build to scale, we intend to appoint a committee to overlook its operation and act independently as a way of helping the committee members learn various skills that are vital to any business in the real world.

Conclusion

We are here to learn from one another and I call upon you all to treat everyone with maximum respect.

I wish you a great experience with BeezGroup, and thank you for being part of us.

Sincerely,

SIMON PETER MUJUNI
